Received 5 December 2007; revised 28 January 2008; accepted 30 January 2008; published online 18 March 2008

**We carried out a nationwide case-control study of childhood brain tumours in Sweden ( $n=512$ ) by histological subtype in relation to prenatal ultrasound, extracting data from antenatal records and the Medical Birth Register. We found no increased risk for brain tumour after ultrasound exposure, either for all tumours or for any subgroup.**

**Keywords:** brain tumour; childhood; ultrasound; epidemiology
