Erratum to correct Lafay-Cousin et al. “Clinical, Pathological, and Molecular Characterization of Infant Medulloblastomas Treated with Sequential High-Dose Chemotherapy.” Pediatric Blood Cancer 2016 Sep;63(9):1527-34

It was brought to our attention that a typographical error of significant importance was present in the final version of the manuscript. On page 1528, in the paragraph, “treatment protocol,” the sentence in lines 10–12 should read, “The consolidation phase included three consecutive cycles of high-dose carboplatin (17 mg/kg IV on days 0 and 1) and thiotepa (10 mg/kg IV on days 0 and 1).”

Instead of the published version "The consolidation phase included three consecutive cycles of high-dose carboplatin (17 mg/kg IV on days 0 and 1) and thiotepa (10 mg/kg IV on days 0, 1, and 2)".

Should treating physicians refer to our publication to treat a patient, this error could lead to incorrect dosing of the chemotherapy and increased toxicity if the thiotepa is given over more than 2 days. The full publication of the original clinical trial CCG 99703 has been published by Cohen et al (Pediatr Neurol. 2015;53:31-46).
